Do Now: Adobe Illustrator and ai2html

Complete the following tasks using 02-do-now.ai. You can preview what the completed ai2html export should look like in the PREVIEW folder.

General text fixes

- All headlines should be 26pt, and all other text should be 16pt.
- Headlines and subheads should be left-aligned

Medium chart

- Vertically center all of the bars
- Turn the 'Something' line into an arrow
- Direct the 'Something' arrow at 45 degrees towards the red bar
- Add a light grey background between -3 and 0, all the way across the chart

Laptop chart

- Turn the 'Something' line into an arrow
- Add a dashed red line at '2'
- Make the bars 4x thicker

Mobile chart

- Turn the 'Something' line into an arrow
- Move the arrow to be going at a 45 degree angle up and right
- Rotate the bottom text to be straight across
- When I export, it's missing some of the chart - fix that

To submit

Save .ai file, run the ai2html script (I've included it just in case). Use the output to fill in 02-donow-template.html.

Zip up the following and submit via CourseWorks:

- Completed 02-do-now.ai file
- ai2html-output folder
- Completed 02-do-now-template.html

If you did not finish in time, just submit what you have.
